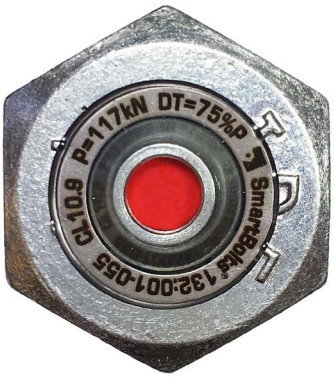
SmartBolts®

KNOW AT A GLANCE IT'S TIGHT

SmartBolts are tension indicating fasteners that ensure proper clamp force is acheived at installation and maintained over time. Each SmartBolt features a visual indicator that changes color to measure and display tension in real time. Tension creates the clamp force that keeps a bolted joint secure.

MACHINE BUILDING
MRI MACHINE
ELECTRICAL CONNECTION JOINT



MRI, or magnetic resonance imaging, is a scanning technique that uses a strong magnetic field to generate detailed images of the human body. The magnetic field is generated when electrical current is passed through multiple coils of conductive wire. SmartBolt DTI provides visual feedback that these critical electrical connections are properly secured by the manufacturer and during scheduled maintenance, which ensures the MRI machines operate safely and reliably.
