

# SmartBolts® Keep the Power Flowing in Electrical Busway

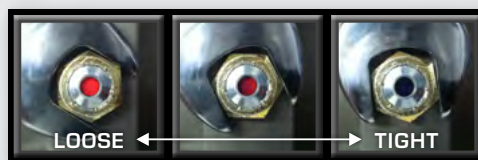

SmartBolts® are the fastener of choice for data centers, factories and commercial buildings worldwide.

## Avoid Costly Power Outages!

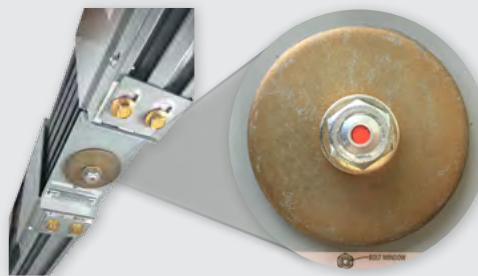

Just a few minutes of downtime can cost technology companies and manufacturers thousands, so it's critical to keep the power flowing 24/7.

Achieving proper bridge joint bolt tension during installation of busway is critical. Both over- and under-tightening can result in a poor electrical connection.

The SmartBolts® indicator turns from **red** to **black** when proper tension has been reached and is reusable for the life of the fastener.

Spot loose connections BEFORE outages occur!
